California Proposition 65 Statement

Proposition 65 is a California law that has been in effect since 1986 to promote clean drinking water and keep toxic substances that can cause cancer and birth defects out of consumer products. Proposition 65's formal title is "The Safe Drinking Water and Toxic Enforcement Act of 1986. It is administered by Cal/EPA's Office of Environmental Health Hazard Assessment (OEHHA).

Of the more than 900 substances found on the Prop 65 List, Positronic Industries, Inc. products may contain cobalt, beryllium, cadmium, nickel, and lead in metallic form; hexavalent chromium as a sealer, and/or antimony oxide as an additive to enhance flame retardant capabilities; methanol and, other materials found in dyes, moldings and resins, in minute quantities. These materials and concentrations are in compliance with EU RoHS, WEEE and other directives. However, due to the nature of our products which are used almost exclusively in long-life, durable goods such as military/aerospace equipment, industrial equipment, high-end telecom equipment and the like, there is no reasonable expectation that our products containing the above mentioned substances would be released into the environment and subsequently found to contaminate the California water supply. Our products are not intended for personal use by the general public or in products intended for home use nor are the components of our connectors assembled or handled by workers in California unless a California company has that specific requirement.

Positronic Industries, Inc. is committed to providing value and satisfaction in all our products. If you have questions about product safety or concerns regarding Proposition 65 requirements please feel free to contact Dr. Kathleen Gentry, Product Compliance Manager at kaygentry@connectpositronic.com.
